

FN - Function Features

To activate the FN (Function) features on your Goldtouch Elite Adjustable Keyboard, press the FN key. An orange FN indicator light will appear in the Status Bar on the upper right corner of your keyboard when the FN function is enabled. When FN is turned on, you're free to utilize the following Function Features, without having to hold down the FN key:

Windows Only FN Features

- ✉ Email
- 🧮 Calculator
- 🏠 Home Screen
- 🔍 Windows Search
- ✂️ Snip Tool
- 💻 My Computer

Mac Only FN Features

- ☀️ Brightness Down
- ☀️ Brightness Up
- 🗄️ Dashboard
- 🔍 Spotlight

Windows & Mac FN Features

- ⏮️ Rewind
- ⏸️ Play/Pause
- ⏭️ Fast Forward
- 🔇 Mute
- 🔊 Volume Down
- 🔊 Volume Up

Mac users only - In Mac Mode, Eject and Power do not need the FN key enabled. Only function row F1-F12 require FN be engaged.

Keyboard Status Bar

FN Indicator Light Guide:

FN - An orange light will appear in the status bar below FN when the FN feature is engaged.

Num Lock - An orange light will appear in the status bar below (9) when the Num Lock feature is enabled.

Scroll Lock - An orange light will appear in the status bar below Scroll Lock when this feature is engaged.

Caps Lock - An orange light will appear in the status bar below Caps Lock when Caps Lock is engaged.

Note: In order for the Num Lock Feature to work, it must be used in conjunction with the FN feature. The orange status bar lights for both FN and (9) must be engaged for Num Lock to work. This is to prevent System BIOS from automatically engaging Num Lock.

||| **GTE-08899W** GOLDTOUCH ELITE WIRELESS ADJUSTABLE KEYBOARD - PC & MAC - 2.4 GHz WIRELESS

User Manual

Congratulations on purchasing your Goldtouch Elite Adjustable Keyboard.

You've joined the hundreds of thousands of Goldtouch customers who have traded in their OEM keyboards for the most comfortable ergonomic keyboards ever designed.

At Goldtouch, we believe the keyboard should fit the unique needs of the individual user, not force the user to conform to the keyboard. Body type, shoulder width, hand position, and other health and lifestyle differences contribute to a user's own unique needs when carrying out computer work.

Our new and improved Goldtouch Elite Adjustable Keyboard features a thinner, less bulky profile, with an updated handle design. Squeeze the handle to effortlessly adjust our patented ball and lever locking joint to adjust the keyboard. Making these personalized adjustments for customized comfort can reduce the risk of computer-related repetitive strain injuries (RSI) while boosting productivity.

Every Goldtouch keyboard is designed for business, from the exceptional quality of the design components down to the driver-free setup. We strive to promote personal productivity, comfort, and a speedy return on investment. Remember: If It Isn't Adjustable, It Isn't Ergonomic.™

Thank you for your purchase. We wish you years of comfort and productivity.

Getting Started - Initial Keyboard Setup

Connecting your keyboard via USB:

1. **PC Windows Users**, begin by selecting your operating system by adjusting the switch located on the back of the keyboard to PC mode.
Mac OSX Users, begin by selecting your operating system by adjusting the switch located on the back of the keyboard to Mac mode.
2. With your computer turned on, plug the Goldtouch Elite Keyboard into an open USB port on your desktop or laptop. Plug your keyboard directly into a computer USB port for initial discovery.
3. Please allow sufficient time for Windows or Mac OS to automatically recognize the keyboard and install the proper drivers. Mac users will be prompted for keyboard assistant inputs to identify the keyboard type.
4. When the system level drivers are installed and Windows or Mac OS setup is completed, you can begin working.

Additional USB Setup Information

Laptop with Docking Station: If you are using a laptop through a Docking Station, please connect the keyboard directly into an available USB port on the computer itself for the first time configuration and driver installation. Once you have followed the instructions above, you can connect the keyboard through the Docking Station for regular use.

Desktop or Laptop with Limited USB Ports: We recommend that your keyboard always be plugged directly into your computer's USB port if possible. If your computer does not have a sufficient number of USB points you may want to add a powered USB hub or port expander to accommodate multiple devices (like mice, printers, numeric keypads, PDA's, etc.).

Multiple Computers via KVM Switch: If you are connecting two or more computers through a KVM switch, be sure to plug the keyboard into each computer that will be used before connecting it to the KVM switch. A KVM switch will not allow the drivers to install automatically; therefore it is necessary to connect the keyboard directly into each computer for proper installation for the first time. Be sure that your KVM switch is for USB devices, not PS/2.

Alternate Layout — PC & Mac Versions (switch located on the back of the keyboard)

How to adjust the Goldtouch Elite

Making adjustments for personalized comfort

With your new Goldtouch Elite Keyboard, you can modify the horizontal and vertical positions to give you the greatest level of comfort.

NOTE: We recommend making small adjustments as follows and increasing these over time, to allow yourself to get acclimated to the Goldtouch keyboard layout.

Horizontal 'split' adjustments

The first adjustment of your new Goldtouch Elite Keyboard is to adjust the keyboard to straighten your wrists and forearm along the horizontal plane.

Bring your elbows in to your sides and relax your hands in front of you. This is the angle you want to adjust your keyboard to. Press the lever on top of the keyboard, then move the segments until the angle of each panel matches the natural line created by your fingers across the center row of keys.

Vertical 'tent' adjustments

Next, you will find out your hand's natural angle on the vertical plane. Using the angle determined above, press the lever and move the segments upwards to replicate this angle on the vertical plane.

NOTE: Don't forget to retain your split horizontal angle as part of this final adjustment.

FN - Embedded Numeric Keypad Feature

To activate the Elite embedded numeric keypad:

1. Press the FN key to turn on the function (FN) feature. An orange indicator light will appear in the Status bar on the right-hand side of your keyboard.
2. Press the Num Lock key in the lower left-hand corner of the keyboard. The (9) indicator light on the keyboard Status Bar will turn orange when Num Lock is engaged.
3. The embedded Numeric Keypad on the right side of your keyboard is now ready to use.

When the numeric keypad is engaged, you can easily toggle between regular keyboard mode and the embedded numeric keypad by simply turning FN off and on, without the need to disengage both the Copy Function (FN) key and the Num Lock Key.

NOTE: To turn off the Num Lock and FN features, simply press the Num Lock and FN keys to deactivate them. The indicator lights on the Status Bar will display when these functions are deactivated.
